Acute toxicity (Gases inhalation), Product LC50 > 5.16mg/l (This was the highest attainable concentration.) Irritant properties Skin corrosion/irritation Non-irritant. Serious eye damage /irritation Non-irritant. Sensitization Skin sensitization Non-sensitizer Germ cell mutagenicity Ames test :Negative Carcinogenicity (Carbon black) The IARC classified carbon black as a Group 2B carcinogen(possible human carcinogen). But carcinogenicity was not observed with toner containing carbon black in chronic rat inhalation study.

No reproductive toxicity data available

Delayed and immediate effects and also chronic effects from short- and long-term exposure

#### **Chronic Effects**

In a study in rats by chronic inhalation exposure to a typical toner, a mild to moderate degree of lung fibrosis was observed in 92 % of the rats in the high concentration (16 mg/m3) exposure group, and a minimal to mild degree of fibrosis was noted in 22% of the animals in the middle (4mg/m3) exposure group. These findings are attributed to "lung overloading", a general response to excessive amounts of any dust retained in the lungs for a prolonged period. No Aspiration hazard data available
