SECTION 508 COMPLIANCE

Advancing equity through accessible technology with Toshiba.

Empowering everyone to print with confidence.

Millions of Americans with disabilities contribute to our society every day, but they often face barriers when it comes to accessing information and technology.

In recognition of this and in compliance with Section 508, Toshiba offers a range of innovative features on our multifunction printers (MFPs) that empower people with disabilities to overcome these barriers and participate fully in the workplace.

From customizable screens and voice guidance to optional accessories and adjustable height platforms, Toshiba MFPs cater to a wide spectrum of needs. Toshiba's commitment to accessibility goes beyond features. We also prioritize intuitive design and user-friendly interfaces, ensuring that everyone can access the power of MFP technology with ease.

Accessible technologies and features of Toshiba MFPs.

eConnect TouchFree

Toshiba's eConnect TouchFree app lets you operate your MFP using your Apple iOS® or Android™ smartphone or tablet. Enjoy seamless access to printing, scanning and more—all with the tap of a finger.
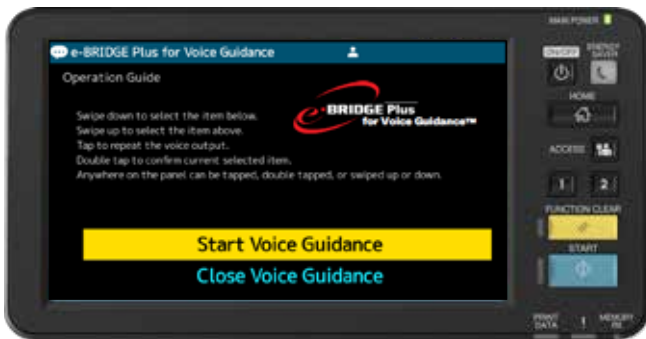

Simply scan a QR code on the device with the app when on the same network to start harnessing the power of your MFP from your mobile device.

e-BRIDGE Plus for Voice Guidance

Every tap speaks volumes with e-BRIDGE Plus for Voice Guidance app. Designed for users with visual impairments, this app provides a seamless and confident experience at the MFP, empowering users to independently operate the devices. With verbal affirmation of setting selections on the front panel and limited-feature menu for accessing key functions with a simple swipe, the chances of errors are minimized.

Tilting Front Panel

Toshiba's MFPs with tilting front panels put control at your fingertips. The adjustable angle makes it easier to see and operate the device, no matter your height or mobility.

Accessible Arm

Take the strain out of document loading. Toshiba's Accessible Arm allows you to lift and lower the RADF with ease when placing documents on the platen, minimizing strain and maximizing accessibility for document handling.

One Touch User Templates

With One Touch User templates, Toshiba transforms your MFP into a productivity powerhouse, enabling you to work smarter, not harder. You can store your most frequent scanning and copying settings in dedicated template buttons on the MFP's front panel, turning multi-step workflows into single-touch actions to save you time and effort.

Flexible Time-Out Settings

Never feel rushed at the MFP again. Flexible Time-Out Settings let you adjust the front panel reset time to match your pace, giving you the freedom to program complex jobs without the pressure of a ticking clock and your MFP returning to default settings.

Audible Beeps

Audible beeps provide a discreet yet informative way to monitor your MFP's status and tasks, even while you're focused on other things. With six distinct patterns, it's an invaluable tool for both users with a visual impairment and those who appreciate multitasking.

VPAT Checklists

Committed to accessibility? Toshiba offers VPATs (Voluntary Product Assessment Templates) for all models upon request, providing clear documentation of Section 508 compliance and ensuring transparency for informed decision-making.
